EASY STEPS

THE INNOVATIVE SURETOUCH MASONRY SYSTEM OFFERS EASE OF INSTALLATION WHILE ALLOWING FOR TRULY CREATIVE, AESTHETIC POSSIBILITIES.

This unique, innovative modular system lets you enhance the appearance of the cladding of your home with simple installation for flawless results. For additional information, installation video's and more, visit our website at suretouch.ca.

1. INSTALL THE PANELS

Screw the premolded insulating panels to the building frame using stainless steel screws and anchors. The anchors that extend beyond the panel at the joints will later be finished with mortar.

2. INSERT THE STONES

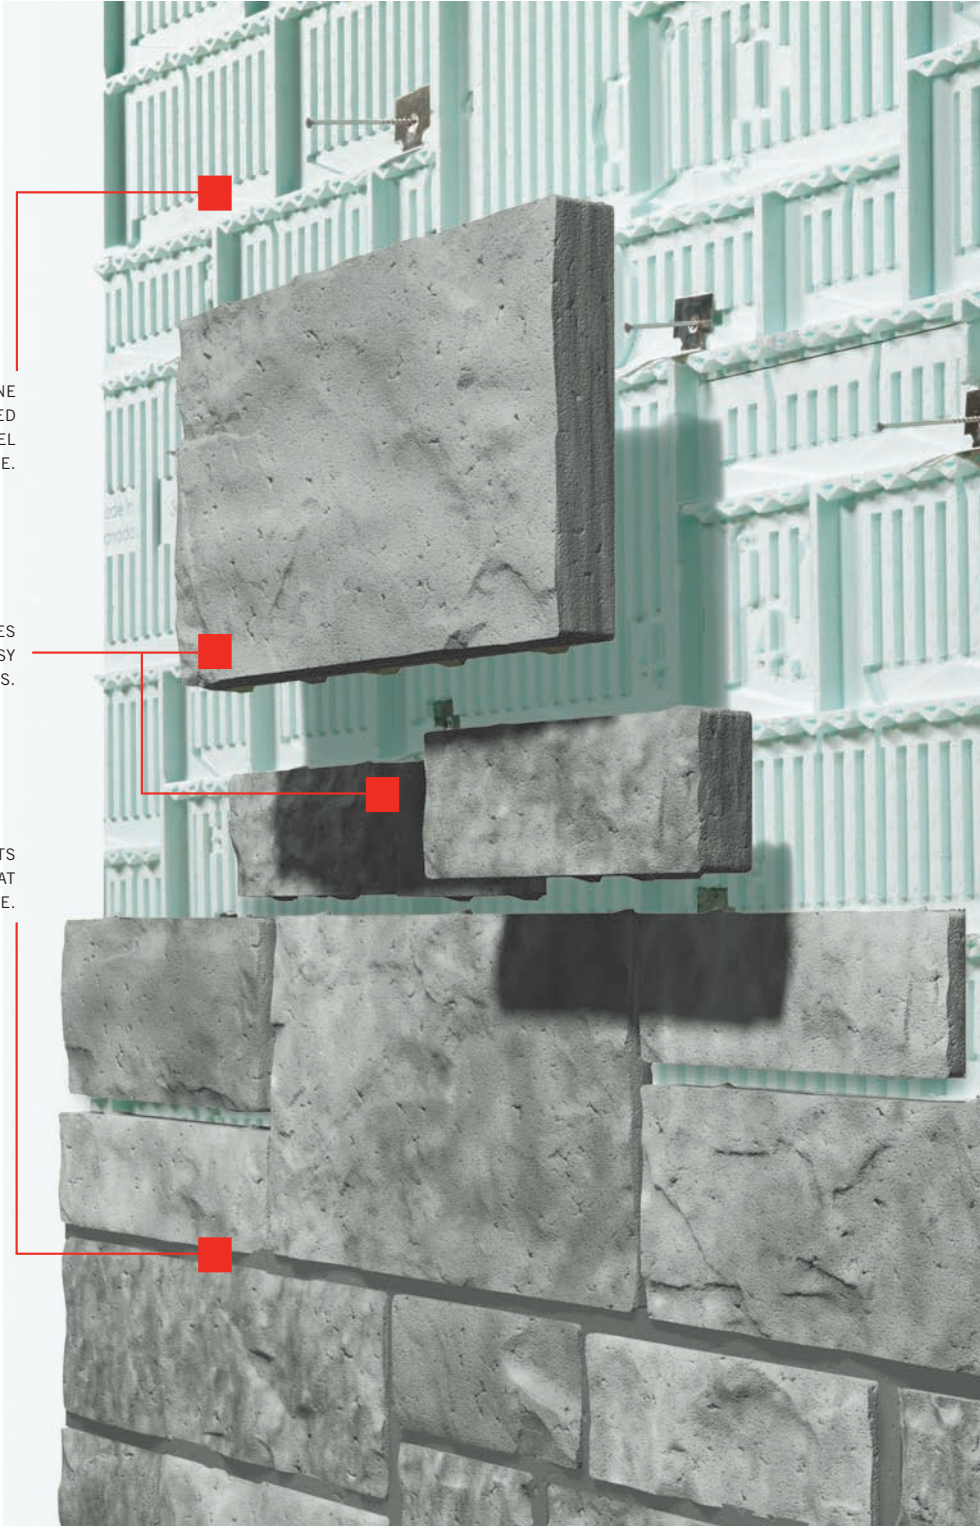

Place the stones in the premolded insulating panel cells and insert them into place using a bit of pressure.

3. JOINT THE STONES

Using a mortar bag, inject the Suretouch mortar between the stones to set them in place. Simply smooth the joints, remove the excess mortar and step back to admire your work.

PREMOLDED POLYSTYRENE
